

Treatment, nutrition and follow-through

DEL MAR FIELD CASE | October 17, 2026

Two services during one visit

I treated a Canary Island date palm and applied palm-specific fertilizer during the same visit. I recorded both services and included the next recommended treatment date on the invoice.

A record that carries forward

The owner can refer back to the work performed and the recommended next step. This visit was a one-time service; a future recommendation is not a booked return appointment.

Care for the palm and the site

I review the palm, known treatment history and site before recommending work. Fertilization is discussed and quoted for the property. It does not replace pest protection and is not automatically included in an annual plan.

This record demonstrates work completed. It does not establish a nutrient deficiency, improved growth, recovery or a guaranteed treatment outcome.
